## NEW 80★10★10 RANGE

Our new products in the popular Meat Feast range are based on the 80-10-10 prey model of raw feeding for complete and balanced canine nutrition.

"The 80-10-10 Meat Feast range has been particularly exciting to develop. We have been hugely encouraged by the success of our existing Meat Feast product, and our customers have been calling out for us to develop the range. We have been extremely focused on making sure we deliver the highest quality, ethically sourced, and sustainable raw ingredients. We are now pleased to offer the finished products to our customers," said Greg Van Praagh, Managing Director at Benyfit Natural.

The Meat Feast range is based on the prey model of raw feeding. All products in the range contain 80% human-grade muscle meat, 10% bone, 5% heart, and 5% liver. The new 80-10-10 Meat Feast range includes 7 single protein source recipes: beef, chicken, turkey, pheasant, rabbit, venison, and mixed game. All raw materials are ethically sourced in the UK. The pheasant, venison, and rabbit used in the recipes are wild, and sourced locally to the Benyfit Natural factory in Sheffield Park.

The 80-10-10 formula of meat, bone, and offal in the Meat Feast range delivers protein-rich nutrition in a complete and balanced meal. A raw meat diet free from vegetables, grains, and low-quality protein sources is especially beneficial for dogs that suffer from yeast intolerances, skin irritation, and allergies.

We have been stunned by the number of dogs that suffer from allergies, itchy skin, hotspots, and yeast intolerances which are often caused by starchy vegetables. The 80-10-10 Meat Feast range was developed to provide a solution to these common health problems.
